Coding Club Schedule

Git: (19 May, 1 June)
Git is a distributed version control system that enables software developers to track changes and collaborate on projects effectively. It provides a platform for managing source code and facilitates seamless collaboration among multiple developers or teams working on the same project.

Node Js: (27 May, 3 June, 10 June)
Node.js is an open-source, server-side runtime environment built on Chrome's V8 JavaScript engine. It allows developers to run JavaScript code outside of a web browser, enabling them to build scalable and high-performance network applications.

CodeAlong: (every day)
CodeAlong is a collaborative problem-solving session where individuals come together to work on coding challenges in a group setting. It provides an interactive and supportive environment for participants to solve problems, share ideas, and learn from each other's approaches.

Data Science: (29 May - 1 June)
Data science is an interdisciplinary field that combines techniques, tools, and methodologies to extract insights and knowledge from data. It involves the application of statistical analysis, machine learning, data visualization, and domain expertise to solve complex problems and make informed decisions.

NQT (National Qualifier Test): (29 May - 10 June)
Problem-solving sessions are an effective way to prepare for the NQT examination, which assesses the aptitude and problem-solving skills of candidates. These sessions aim to improve your problem-solving abilities by providing guidance, practice, and strategies to approach different types of problems commonly encountered in the test.

Angular: (coming soon)
Angular is a popular open-source JavaScript framework for building robust and scalable web applications. Developed and maintained by Google, Angular provides a comprehensive set of tools and features that simplify the development process. It follows the Model-View-Controller (MVC) architectural pattern and offers a component-based approach to building applications.

AWS: (Coming Soon)
AWS, short for Amazon Web Services, is a comprehensive cloud computing platform provided by Amazon. It offers a wide range of services that enable organizations and individuals to build and deploy various types of applications and services in a flexible, scalable, and secure manner.

Portfolio Making:
Creating a portfolio is an essential step for showcasing your skills, experience, and projects to potential employers or clients. A well-designed and organized portfolio can make a lasting impression and highlight your expertise.

Collaborative Project: (1June - 30 june)
A collaborative project is a joint effort where individuals or teams work together to achieve a common goal or complete a shared project. It involves pooling resources, knowledge, and skills to accomplish tasks, solve problems, or create something collectively.

Laravel: (15-17 June)
Laravel is an open-source PHP web framework that follows the Model-View-Controller (MVC) architectural pattern. It provides a robust and elegant syntax, along with a range of built-in features and tools, making it a popular choice for developing web applications.
